SUMMARY

Frontend developer building clean, responsive web apps with React. I like taking an idea from concept to a working interface, with a growing focus on user experience and interaction design. My background in operations and coordination shaped strong organizational habits and attention to detail that carry into how I build.

RELEVANT PROJECTS

StyleMate

2026

- Built a full featured wardrobe organizer in React with CRUD item management, category filtering, and an outfit builder that links saved outfits to wardrobe items.
- Implemented a random outfit generator, dark mode with persistent theme state, and custom modal components for confirmations and validation.
- Deployed on Vercel with localStorage persistence across sessions.

Personal Portfolio Website

2026

- Designed and built a responsive personal portfolio from scratch using HTML, CSS, and JavaScript, including hover animations, smooth scroll navigation, and a dark themed UI.
- Deployed and version controlled using Git and GitHub, with hosting via Netlify and a custom domain.

Pomodoro Timer

2026

- Built an interactive Pomodoro timer with start, pause, and reset controls, and automatic switching between focus and break sessions.
- Added a settings panel for customizable session durations and a task manager with add and delete, persisted using Local Storage.
- Deployed via GitHub Pages, with a fully responsive layout across devices.

SKILLS

Programming Languages

JavaScript, HTML, CSS

TOOLS & FRAMEWORKS

React, Git, GitHub, Vercel, Netlify, Supabase, Figma

EDUCATION

Wittenborg University of Applied Sciences

Information Management
